REASONS FOR ALLOWANCE

> The following is an examiner's statement of reasons for allowance: The present invention is directed towards a method and apparatus for coding, in which, an evaluation section for deciding, on the basis of the characteristics of an image signal having a plurality of pixel data, the coding order for the plurality of pixel data. The closest prior art, Makur (USPN 4,963,030), shows a similar system, in which, blocks of an image or voice input signal are decimated by a selected factor and distributed through a plurality of ordered channels for vector quantization coding using a codebook in which vectors are ordered, such as by their average intensity, wherein the first channel makes a full search of stored vectors in the codebook for a best match and outputs the index of the best match. However, Makur fails to address: "for wherein the evaluation section selects pixel data having a strong correlation with respect to a given noted pixel data, from the plurality of pixel data, and decides the selected pixel data as pixel data next to the noted pixel data". This distinct feature has been added to both independent claims and render them allowable.
